Vacuum Interrupters Introduces RVI-55B532575P1 Replacement Vacuum Interrupter

Farmers Branch, TX, June 30, 2022 — [Vacuum Interrupters](https://www.vacuuminterrupters.com), a leading manufacturer of replacement vacuum interrupters, pole assemblies, parts, and components for medium-voltage vacuum circuit breakers and contactors, introduces the [RVI-55B532575P1](https://www.vacuuminterrupters.com) replacement vacuum interrupter.

This direct fit-and-function replacement unit meets original equipment ratings and is intended for use in select General Electric (GE) CR193 AC vacuum contactors found in the GE Limitamp controller application. The RVI-55B532575P1 is built to provide excellent high-voltage insulation, high-cumulative and high-breaking capacity, exclusive internal torsion control, and fine alumina ceramic for an excellent vacuum seal.

The replacement vacuum interrupter offers 400 A RMS-rated current, 7.2 kV RMS maximum voltage, 60 kV peak impulse withstand, and 6.0 KA RMS-rated short-circuit breaking current.

No modification is required for proper installation and operation in the existing electrical equipment. Vacuum Interrupters can also provide assembly components and mounting hardware to aid in installation and shorten downtime.

About Vacuum Interrupters

Vacuum Interrupters, developer of the Magnetron Atmospheric Condition (MAC-TS4) predictive vacuum interrupter test set, Circuit Breaker Timer (CBT-1201 and CBT-1202), and Vacuum Interrupter Integrity Tester (VITS60M and VITS75M) test systems, provides replacement vacuum interrupters, pole assemblies, and components for virtually all medium-voltage vacuum circuit breakers and vacuum contactors, and offers High Voltage Test Lab and SF6 interrupter rebuild/replacement capabilities. Learn more at [VacuumInterrupters.com](https://www.vacuuminterrupters.com) or call us at 214-442-5877.
